PROFESSIONAL SUMMARY

Results-driven Software Engineer with a strong foundation in backend development, cloud infrastructure, and scalable system architecture. Skilled in designing and deploying high-availability microservices using Python, FastAPI, and PostgreSQL. Experienced in leveraging automation to enhance operational efficiency, including identity management and disaster recovery systems. Recognized for a proactive approach to solving complex technical challenges and consistently delivering robust, user-centric solutions. Committed to building impactful software that supports strategic business objectives and elevates user experience.

EXPERIENCE

Software Developer

June 2022 – Present

Jio Platforms Limited

Ghansoli

- Engineered REST APIs for a hybrid cloud management platform for Identity Lifecycle Management module, using Python, FastAPI, PostgreSQL providing software as a service (SaaS).
- Used Python libraries (pandas, numpy) in FastAPI framework for faster processing of huge datasets in an asynchronous environment also Improved performance of API using Background tasks, Dependency Injections
- Specialized in PostgreSQL for database management and optimizing development
- Developed a system providing features like Dashboards for auditing data, schedulers with reminder emails to the customer, providing a platform to create, manage and maintain Identities in VMs for multiple Technologies.
- Developed the Disaster Recovery as a Service (DRaaS) system, using Oracle, Apache Airflow, Kafka, Prometheus, Kibana enabling seamless asset recovery across multiple regions. Improved recovery speed by 25% through cross-site data replication.
- Used Kubernetes for container orchestration and automated deployments.

PROJECTS

Real-Time Sign Language Recognition | Python, OpenCV, KNN, Pandas, Numpy

June 2022 – June 2022

- Built a real-time sign language interpreter that recognizes hand gestures and converts them into spoken language. Helped bridge communication gaps for the deaf and mute.
- Processed video input in real time using OpenCV and MediaPipe using OpenCV, Python
- Used KNN algorithm for classification of hand gestures
- Converted predicted signs into text and audio output using pandas, numpy, pyttsx3.

COVID-19 Data Analysis | Jupyter Notebook, python, pandas, Matplotlib, Git

Dec 2020 – Dec 2020

- Visualized global pandemic trends with line plots and bar charts
- Used Kaggle Datasets for data processing
- Aggregated and filtered real-time data for comparative analysis

TECHNICAL SKILLS

Languages: Python, DSA, OOPS, SQL (Postgres, Oracle), Kibana, HTML/CSS, Bash, Linux,

Frameworks: FastAPI, Django, Flask, Shiny-R

Developer Tools: Git, Kubernetes, AWS, PyCharm, Jupyter Notebook, Microsoft Azure DevOps

Libraries: SQLAlchemy, Pydantic, Logger, Pandas, NumPy, Matplotlib, OpenCV

EDUCATION

University of Mumbai

Bachelor of Engineering in ECTC

Mumbai

Aug. 2019 – May 2022
